## **Assignment 5:** *Manipulated Personal Bust*

This take-home assignment was an exercise for using OpenSCAD's *"for()"* and *"import"* functions in order to manipulate the 3d self-portrait busts we created previously. While making this, everything seemed to go as planned until I rendered it to be exported. When I rendered it, it lost all form and looked nothing like it originally did. I wasn't able to properly export it to a .stl file.
